

Computer Vision 2 – Lecture 3

Tracking by Online Classification (25.04.2016)

Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
leibe@vision.rwth-aachen.de, stueckler@vision.rwth-aachen.de

RWTH Aachen University, Computer Vision Group
<http://www.vision.rwth-aachen.de>

Content of the Lecture

- Single-Object Tracking
 - Background modeling
 - Template based tracking
 - Color based tracking
 - Contour based tracking
 - **Tracking by online classification**
 - Tracking-by-detection
- Bayesian Filtering
- Multi-Object Tracking
- Visual Odometry
- Visual SLAM & 3D Reconstruction

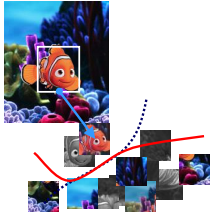

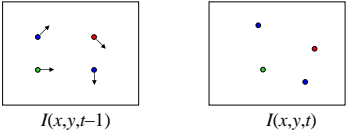

Image source: Helmut Grabner, Disney/Pixar

2 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler

Recap: Estimating Optical Flow

- Optical Flow
 - Given two subsequent frames, estimate the apparent motion field $u(x,y)$ and $v(x,y)$ between them.
- Key assumptions
 - **Brightness constancy**: projection of the same point looks the same in every frame.
 - **Small motion**: points do not move very far.
 - **Spatial coherence**: points move like their neighbors.

3 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide credit: Suetflass, Lazebnik

Recap: Lucas-Kanade Optical Flow

- Use all pixels in a $K \times K$ window to get more equations.
- Least squares problem:

$$\begin{bmatrix} I_x(p_1) & I_y(p_1) \\ I_x(p_2) & I_y(p_2) \\ \vdots & \vdots \\ I_x(p_{25}) & I_y(p_{25}) \end{bmatrix} \begin{bmatrix} u \\ v \end{bmatrix} = - \begin{bmatrix} I_t(p_1) \\ I_t(p_2) \\ \vdots \\ I_t(p_{25}) \end{bmatrix} \quad \begin{matrix} A & d = b \\ 25 \times 2 & 2 \times 1 & 25 \times 1 \end{matrix}$$
- Minimum least squares solution given by solution of

$$\begin{bmatrix} \sum I_x I_x & \sum I_x I_y \\ \sum I_x I_y & \sum I_y I_y \end{bmatrix} \begin{bmatrix} u \\ v \end{bmatrix} = - \begin{bmatrix} \sum I_x I_t \\ \sum I_y I_t \end{bmatrix} \quad \begin{matrix} A^T A & & \\ & & A^T b \end{matrix}$$

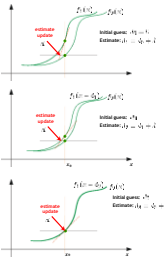

Recall the Harris detector!

4 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide credit: Suetflass, Lazebnik

Recap: Iterative Refinement

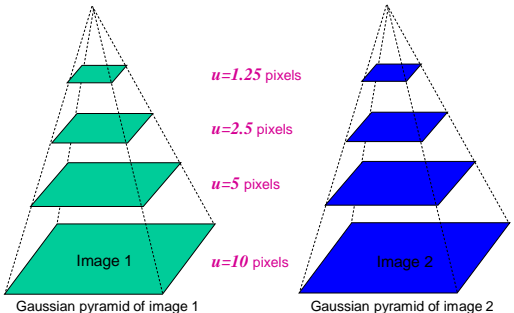

- Estimate velocity at each pixel using one iteration of LK estimation.
- Warp one image toward the other using the estimated flow field.
- Refine estimate by repeating the process.
- Iterative procedure
 - Results in subpixel accurate localization.
 - Converges for small displacements.

5 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide adapted from Steve Seitz

Recap: Coarse-to-fine Optical Flow Estimation

$u=1.25$ pixels
 $u=2.5$ pixels
 $u=5$ pixels
 $u=10$ pixels

6 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide credit: Steve Seitz

Recap: Coarse-to-fine Optical Flow Estimation

7 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide credit: Steve Seitz

Recap: Shi-Tomasi Feature Tracker (→KLT)

- Idea
 - Find good features using eigenvalues of second-moment matrix
 - Key idea: "good" features to track are the ones that can be tracked reliably.
- Frame-to-frame tracking
 - Track with LK and a pure *translation* motion model.
 - More robust for small displacements, can be estimated from smaller neighborhoods (e.g., 5x5 pixels).
- Checking consistency of tracks
 - Affine registration to the first observed feature instance.
 - Affine model is more accurate for larger displacements.
 - Comparing to the first frame helps to minimize drift.

J. Shi and C. Tomasi. *Good Features to Track*. CVPR 1994.

8 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler

Recap: General LK Image Registration

- Goal
 - Find the warping parameters \mathbf{p} that minimize the sum-of-squares intensity difference between the template image $T(\mathbf{x})$ and the warped input image $I(\mathbf{W}(\mathbf{x}; \mathbf{p}))$.
- LK formulation
 - Formulate this as an optimization problem
$$\arg \min_{\mathbf{p}} \sum_{\mathbf{x}} [I(\mathbf{W}(\mathbf{x}; \mathbf{p})) - T(\mathbf{x})]^2$$
 - We assume that an initial estimate of \mathbf{p} is known and iteratively solve for increments to the parameters $\Delta \mathbf{p}$:
$$\arg \min_{\Delta \mathbf{p}} \sum_{\mathbf{x}} [I(\mathbf{W}(\mathbf{x}; \mathbf{p} + \Delta \mathbf{p})) - T(\mathbf{x})]^2$$

9 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler

Recap: Step-by-Step Derivation

- Key to the derivation
 - Taylor expansion around $\Delta \mathbf{p}$

$$I(\mathbf{W}(\mathbf{x}; \mathbf{p} + \Delta \mathbf{p})) \approx I(\mathbf{W}(\mathbf{x}; \mathbf{p})) + \nabla I \frac{\partial \mathbf{W}}{\partial \mathbf{p}} \Delta \mathbf{p} + \mathcal{O}(\Delta \mathbf{p}^2)$$

$$= I(\mathbf{W}([x, y]; p_1, \dots, p_n))$$

$$+ \begin{bmatrix} \frac{\partial I}{\partial x} & \frac{\partial I}{\partial y} \end{bmatrix} \begin{bmatrix} \frac{\partial W_x}{\partial p_1} & \frac{\partial W_x}{\partial p_2} & \dots & \frac{\partial W_x}{\partial p_n} \\ \frac{\partial W_y}{\partial p_1} & \frac{\partial W_y}{\partial p_2} & \dots & \frac{\partial W_y}{\partial p_n} \end{bmatrix} \begin{bmatrix} \Delta p_1 \\ \Delta p_2 \\ \vdots \\ \Delta p_n \end{bmatrix}$$

Gradient Jacobian Increment parameters to solve for $\Delta \mathbf{p}$

10 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide credit: Robert Collins

Recap: Generalized LK Algorithm

- Iterate
 - Warp I to obtain $I(\mathbf{W}([x, y]; \mathbf{p}))$
 - Compute the error image $T([x, y]) - I(\mathbf{W}([x, y]; \mathbf{p}))$
 - Warp the gradient ∇I with $\mathbf{W}([x, y]; \mathbf{p})$
 - Evaluate $\frac{\partial \mathbf{W}}{\partial \mathbf{p}}$ at $([x, y]; \mathbf{p})$ (**Jacobian**)
 - Compute steepest descent images $\nabla I \frac{\partial \mathbf{W}}{\partial \mathbf{p}}$
 - Compute Hessian matrix $\mathbf{H} = \sum_{\mathbf{x}} \left[\nabla I \frac{\partial \mathbf{W}}{\partial \mathbf{p}} \right]^T \left[\nabla I \frac{\partial \mathbf{W}}{\partial \mathbf{p}} \right]$
 - Compute $\sum_{\mathbf{x}} \left[\nabla I \frac{\partial \mathbf{W}}{\partial \mathbf{p}} \right]^T [T([x, y]) - I(\mathbf{W}([x, y]; \mathbf{p}))]$
 - Compute $\Delta \mathbf{p} = \mathbf{H}^{-1} \sum_{\mathbf{x}} \left[\nabla I \frac{\partial \mathbf{W}}{\partial \mathbf{p}} \right]^T [T([x, y]) - I(\mathbf{W}([x, y]; \mathbf{p}))]$
 - Update the parameters $\mathbf{p} \leftarrow \mathbf{p} + \Delta \mathbf{p}$
- Until $\Delta \mathbf{p}$ magnitude is negligible

11 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler

Recap: LK Algorithm Visualization

12 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler

Today: Tracking by Online Classification

Can Machine Learning solve the problem for us?

13 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Image source: Helmut Grabner, Dinesh Divet

Topics of This Lecture

- **Tracking by Online Classification**
 - Motivation
- **Recap: Boosting for Detection**
 - AdaBoost
 - Viola-Jones Detector
- **Extension to Online Classification**
 - Online Boosting
 - Online Feature Selection
 - Results
- **Extensions**
 - Problem: Drift
 - Drift-compensation strategies

14 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler

Tracking Requirements

- **Adaptivity**
 - Appearance changes (e.g. out of plane rotations)
- **Robustness**
 - Occlusions, cluttered background, illumination conditions
- **Generality**
 - Any object

15 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide credit: Helmut Grabner

Tracking as Classification

- **Tracking as binary classification problem**

object vs. background

16 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide credit: Helmut Grabner

Tracking as Classification

- **Tracking as binary classification problem**

object vs. background

– Handle object and background changes by **online updating**

17 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide credit: Helmut Grabner

Idea: Use Boosting for Feature Selection

Object Detector

Fixed training set
General object detector

$\text{sign}(w_1 \cdot \text{feature} + w_2 \cdot \text{feature} + w_3 \cdot \text{feature} + \dots)$

Boosting for Feature Selection

P. Viola, M. Jones. [Rapid Object Detection using a Boosted Cascade of Simple Features](#), CVPR'01.

Object Tracker

On-line update
Object vs. Background

On-Line Boosting for Feature Selection

H. Grabner, H. Bischof. [On-line Boosting and Vision](#), CVPR'06.

18 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide credit: Helmut Grabner

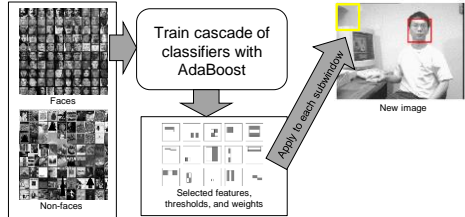

Topics of This Lecture

- Tracking by Online Classification
 - Motivation
- Recap: Boosting for Detection
 - AdaBoost
 - Viola-Jones Detector
- Extension to Online Classification
 - Online Boosting
 - Online Feature Selection
 - Results
- Extensions
 - Problem: Drift
 - Drift-compensation strategies

19 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler

Recap: Viola-Jones Face Detector

- Train with 5K positives, 350M negatives
- Real-time detector using 38 layer cascade (6061 features in final layer)
- [Implementation available in OpenCV: <http://sourceforge.net/projects/opencvlibrary/>]

20 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide credit: Kristen Grauman

Recap: AdaBoost – “Adaptive Boosting”

- Main idea [Freund & Schapire, 1996]
 - Iteratively select an ensemble of classifiers
 - Reweight misclassified training examples after each iteration to focus training on difficult cases.
- Components
 - $h_m(x)$: “weak” or base classifier
 - Condition: <50% training error over any distribution
 - $H(x)$: “strong” or final classifier
- AdaBoost:
 - Construct a strong classifier as a thresholded linear combination of the weighted weak classifiers:

$$H(x) = \text{sign} \left(\sum_{m=1}^M \alpha_m h_m(x) \right)$$

21 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler

Recap: AdaBoost – Algorithm

- Initialization: Set $w_n^{(1)} = \frac{1}{N}$ for $n = 1, \dots, N$.
- For $m = 1, \dots, M$ iterations
 - Train a new weak classifier $h_m(x)$ using the current weighting coefficients $\mathbf{W}^{(m)}$ by minimizing the weighted error function

$$J_m = \sum_{n=1}^N w_n^{(m)} I(h_m(x) \neq t_n) \quad I(A) = \begin{cases} 1, & \text{if } A \text{ is true} \\ 0, & \text{else} \end{cases}$$
 - Estimate the weighted error of this classifier on \mathbf{X} :

$$\epsilon_m = \frac{\sum_{n=1}^N w_n^{(m)} I(h_m(x) \neq t_n)}{\sum_{n=1}^N w_n^{(m)}}$$
 - Calculate a weighting coefficient for $h_m(x)$:

$$\alpha_m = \ln \left\{ \frac{1 - \epsilon_m}{\epsilon_m} \right\}$$
 - Update the weighting coefficients:

$$w_n^{(m+1)} = w_n^{(m)} \exp \{ \alpha_m I(h_m(x_n) \neq t_n) \}$$

22 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking

 - Problem: Drift
 - Drift-compensation strategies

23 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler

Offline Boosting

Given:

- set of labeled training samples
- weight distribution over them

Algorithm:

```

for n = 1 to N
    - train a weak classifier using samples and weight dist.
    - calculate error
    - calculate weight
    - update weight dist.
next
    
```

24 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide credit: Helmut Grabner

Offline Boosting

Given:

- set of labeled training samples
- weight distribution over them

Algorithm:

```
for n = 1 to N
  - train a weak classifier using samples and weight dist.
  - calculate error
  - calculate weight
  - update weight dist.
next
```

25 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
Slide credit: Helmut Grabner

Offline Boosting

Given:

- set of labeled training samples
- weight distribution over them

Algorithm:

```
for n = 1 to N
  - train a weak classifier using samples and weight dist.
  - calculate error
  - calculate weight
  - update weight dist.
next
```

α_1

26 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
Slide credit: Helmut Grabner

Offline Boosting

Given:

- set of labeled training samples
- weight distribution over them

Algorithm:

```
for n = 1 to N
  - train a weak classifier using samples and weight dist.
  - calculate error
  - calculate weight
  - update weight dist.
next
```

27 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
Slide credit: Helmut Grabner

Offline Boosting

Given:

- set of labeled training samples
- weight distribution over them

Algorithm:

```
for n = 1 to N
  - train a weak classifier using samples and weight dist.
  - calculate error
  - calculate weight
  - update weight dist.
next
```

α_2

28 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
Slide credit: Helmut Grabner

Offline Boosting

Given:

- set of labeled training samples
- weight distribution over them

Algorithm:

```
for n = 1 to N
  - train a weak classifier using samples and weight dist.
  - calculate error
  - calculate weight
  - update weight dist.
next
```

Result:

$$h^{strong}(x) = \text{sign}\left(\sum_{n=1}^N \alpha_n \cdot h_n^{weak}(x)\right)$$

$= \alpha_1 \cdot \text{[diagonal line]} + \alpha_2 \cdot \text{[diagonal line]}$

29 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
Slide credit: Helmut Grabner

From Offline to Online Boosting

- Goal
 - Formulate the algorithm such that we can present only 1 training sample at a time (and then forget about it).
 - ⇒ Dual problem: instead of keeping all samples and adding weak classifiers, keep a fixed set of weak classifiers and add samples.
- What changes?
 - Updating the classifiers online can be done easily.
 - Many classification approaches can use online updates.
 - Computing the classifier weights is also straightforward if we know the estimated error (which we can compute).

30 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
Prof. Dr. Bastian Leibe, Dr. Jörg Stückler

From Offline to Online Boosting

- Main issue
 - Computing the weight distribution for the samples.
 - We do not know a priori the difficulty of a sample!
(Could already have seen the same sample before...)
- Idea of Online Boosting
 - Estimate the importance of a sample by propagating it through a set of weak classifiers.
 - This can be thought of as modeling the information gain w.r.t. the first n classifiers and code it by the importance weight λ for the $n+1$ classifier.
 - Proven [Oza]: Given the same training set, Online Boosting converges to the same weak classifiers as Offline Boosting in the limit of $N \rightarrow \infty$ iterations.

N. Oza and S. Russell. [Online Bagging and Boosting](#). Artificial Intelligence and Statistics, 2001.

Online Boosting

Given:
 - ONE labeled training sample
 - strong classifier to update

Algorithm:
 - initial importance
 for $n = 1$ to N
 - update the weak classifier using sample and importance
 - update error estimation
 - update weight
 - update importance weight
 next

Online Boosting for Feature Selection

- Introducing “Selector”
 - Selects **one** feature from its local feature pool

$\mathcal{H}^{weak} = \{h_1^{weak}, \dots, h_M^{weak}\}$

$\mathcal{F} = \{f_1, \dots, f_M\}$

$h^{sel}(x) = h_m^{weak}(x)$

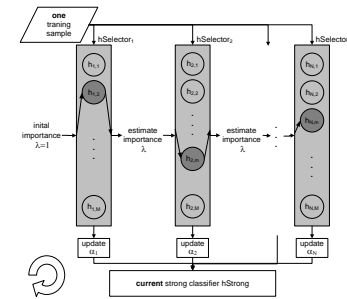

$m = \arg \min_i e_i$

Summary: Tracking by Online Classification

- Interpret tracking as a classification problem
 - Continuously updating a classifier which discriminates the object from the background.
- Online Boosting
 - Adaptation of AdaBoost to process 1 training sample at a time.
 - Process sample by fixed set of classifiers to compute its importance weight.
 - Converges to the same result as Offline Boosting.
- Online Boosting for Feature Selection
 - Perform Boosting on Selectors instead of weak classifiers.
 - Each Selector chooses from a pool of weak classifiers.
 - Selected features and voting weights change over time.
 - Shared feature pool for real-time processing.

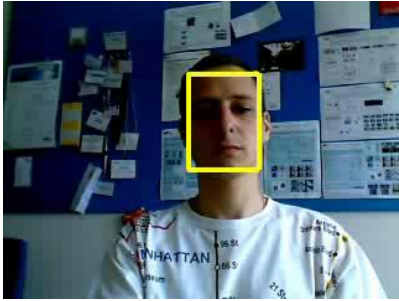

59 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking

Drifting Due to Self-Learning Policy

64 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Slide credit: Helmut Grabner Image source: Grabner et al., ECCV'08

⇒ Not only does it drift, it also remains confident about it!

Self-Learning and Drift

- Drift
 - Major problem in all adaptive or self-learning trackers.
 - Difficulty: distinguish “allowed” appearance change due to lighting or viewpoint variation from “unwanted” appearance change due to drifting.
 - Cannot be decided based on the tracker confidence!
 - Since the confidence is always dependent on the learned model
 - Model may already be affected by drift when the confidence is measured.
 - Several approaches have been proposed to address this.

65 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler

Strategy 1: Match Against Initialization

- Used mostly in low-level trackers (e.g., KLT)
 - Advantage: robustly catches drift
 - Disadvantage: cannot follow appearance changes

J. Shi and C. Tomasi, *Good Features to Track*, CVPR 1994.

66 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler

Strategy 2: Semi-Supervised Learning

Object Detector **Our approach** **Object Tracker**

←-----→

Fixed Training set **Fixed Prior for updating an** **On-line update**
General object detector **Adaptive on-line classifier** **Object vs. Background**

H. Grabner, C. Leistner, H. Bischof, *Semi-Supervised On-line Boosting for Robust Tracking*, ECCV'08.

Object Disappearance

69 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Video source: Grabner et al., ECCV'08

Long-Term Tracking (1h)

70 Lecture: Computer Vision 2 (SS 2016) – Template-based Tracking
 Prof. Dr. Bastian Leibe, Dr. Jörg Stückler
 Video source: Grabner et al., ECCV'08

Strategy 3: Using Additional Cues

- Tracking-Learning-Detection
 - Combination of KLT and Tracking-by-Detection
 - Use a KLT tracker as additional cue to generate confident (positive and negative) training examples.
 - Learn an object detector on the fly using Online Random Ferns.
